

## Latrobe Regional Hospital Cancer Care Centre

Major expansion of the Cancer Care Centre at Latrobe Regional Hospital. The project has resulted in an expanded capacity for chemotherapy services (10 to 22 chairs plus four extra beds) via the addition of a second storey to the existing facility, construction of a third radiotherapy bunker and redevelopment of the hospital's main entry.

Works on the \$22 million project commenced in early 2013 and were delivered in a staged nature to ensure minimal disruption to hospital operations.

The project reached Practical Completion in November 2014.
